

KAANDUU MANAGED

Solution Overview

GROW YOUR BUSINESS, NOT YOUR OVERHEADS

KAANDUU Managed gives your people an AI team that takes on the routine work, chasing and coordination that slow a growing business. You do more without adding the same cost. Built around how you work, deployed in your dedicated environment and managed with you.

Growth brings more of everything: more enquiries to answer, more quotes to prepare, more handoffs to chase and more information spread across chats, email, documents and business systems. Hiring to keep up raises your overheads, and AI tools on their own still leave the work with the same people.

KAANDUU brings your people, AI assistants and specialist capabilities together as one AI team, connected to the systems you already use. Your people request work, add context, make the decisions and track progress. We design, implement and operate the AI team alongside them.

GROW. SAVE. PROTECT.

GROW

Move faster on the right opportunities.

New enquiries answered in minutes, leads followed up until they buy or say no, and quotes out while the customer is still interested, so your salespeople can focus on selling.

SAVE

Cut repetitive work and wasted effort.

Your SOPs carried out consistently, meetings turned into completed actions, and reports and records kept up to date without manual work.

PROTECT

Keep knowledge secure and people in control.

Customer data kept private, approval secured before money or commitments go out, and expertise captured so work continues when people are away.

These are business priorities, not separate products. One workflow can deliver more than one. Start with the work that matters most.

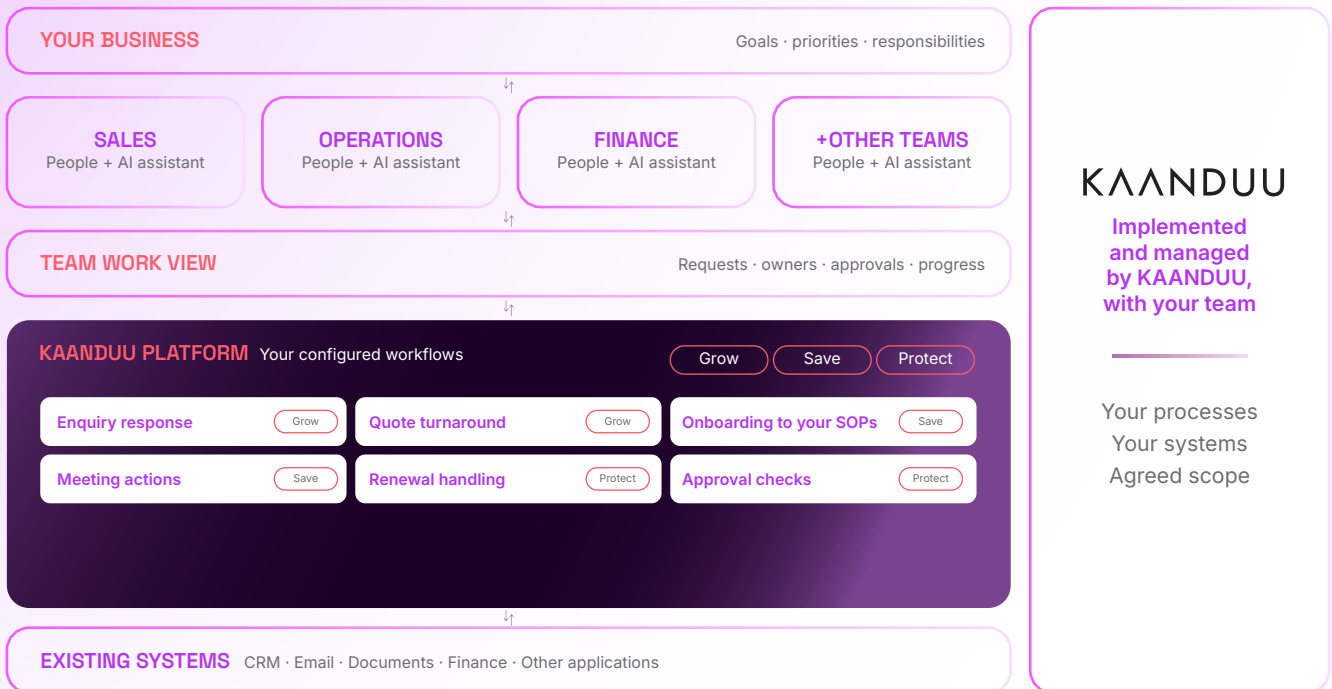

WHY KAANDUU MANAGED?

- ◆ **Gets better with every task:** Procedures and business context are brought into each task, and what works is captured for next time. The AI team improves the longer it runs, with changes to your procedures approved by your people, so each new workflow costs less than the last.
- ◆ **From request to outcome:** A message, schedule or event starts the work. Each task has an owner, visible next steps and decisions routed to the right person. The team work view keeps people and AI working from the same picture.
- ◆ **Built around your processes:** We map how the work actually runs with the people who do it, including steps that were never written down. Once the steps, exceptions and approvals are agreed, the AI team follows them consistently, not at its own discretion.
- ◆ **Implemented and managed with you:** KAANDUU handles deployment, integrations, configuration and ongoing operation, so you don't need AI specialists of your own. You set the priorities and who decides what; we maintain and refine the solution with your team.

YOUR AI TEAM

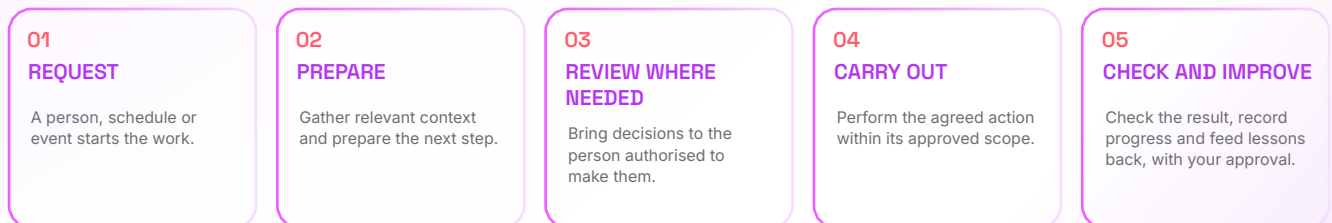

Each person gets an AI assistant to request and review work. Behind the assistants, specialists handle particular activities, such as answering enquiries, preparing quotes or turning meetings into actions. Together they work as one AI team, configured around your business rather than a fixed template.

HOW IT FITS YOUR BUSINESS

Illustrative workflows, configured for your organisation. Grow, Save and Protect identify intended business benefits.

HOW A PIECE OF WORK PROGRESSES

Not every workflow changes a business record. A briefing, recommendation or prepared draft may be the intended result.

CONTROL STAYS WITH YOUR BUSINESS

You decide what the AI team can access, what it may do on its own and when a person must decide. Access controls and approval rules enforce those boundaries in the platform, rather than relying on the AI to behave. Start with preparation and review, then expand what it does as each workflow proves itself.

Deployed in your dedicated environment and connected to your existing systems. Any external services, and how your information is handled, are agreed before anything is connected.

START WITH ONE WORKFLOW THAT MATTERS

Pick a process where missed opportunities, repetitive work or unnecessary risk is costing you today. We scope it with your team, connect the systems and put it to work.

We record how the work runs now as a baseline, agree what success looks like and report results against it before you expand. Results are measured in time returned and cost per outcome, not seats or tokens.
